Confronted by the news that she's been ordered to give a DNA

sample to Immigration and Customs

Enforcement (ICE), actress Alyssa Milano

tweeted out a new petition on her Twitter

account Wednesday. On Friday, Milano

became the latest celebrity to receive a

subpoena from the Department of Homeland

Security (DHS), in order to provide a DNA

sample to the Department of Homeland Security's (DHS) Civil Immigration Enforcement (ICE) unit. "We do have a choice. We can wait for ICE to take a DNA sample or we can just do it ourselves," Milano tweeted. "I just did it." We do have a choice. We can wait for ICE to take a DNA sample or we can just do it ourselves. I just did it.

In a report by The Hollywood Reporter, it was revealed that actress Milano has a decision to make, regarding the submission of a DNA sample. After being informed that she is on the DHS's list of known illegal immigrants, Milano tweeted that she has decided not to submit to the DNA test. "I've decided I don't want to have ICE tell my kids why I'm gone," Milano said. "I don't want to be separated from my husband & children for that reason." Now

**What's New In AutoCAD?**

Also, find a duplicate object in your drawings and add to an existing annotation or dimension.

---

This makes it easier to use existing information from previous drawings without causing conflicts with updates. You can also create custom annotations to store extra information. Custom annotations can be imported as individual annotations or annotations with the Include option. Custom annotations can be used for anything that can store information. Dimensions: Now, you can “fingerprint” your drawings for easier referencing. New dimension properties. AutoCAD can recognize when it needs to print a 0.25" or 0.5" dimension. There's also a new, easier to use print setting. Tap on dimension title to see the range and linear properties. You can turn on this feature to print a quick reference card when you tap on a dimension. Bug fixes: Reduced client side memory consumption. Increased alignment precision when using constraints with grids. Reduced

potential for crashes when you use scale mode. Enhanced command availability for conditional execution. Improved the activation of dimension properties. Improved the accuracy of dynamic rebase when dimensions and lines are outside the scale grid. Improved the handling of zero-length dimensions. Improved compatibility with multiple applications. Improved animation performance for functions that create live views. Improved support for DXF and DWG import formats for 3D models. Improved performance of the symbol manager. Improved performance of locating an object on a page. Improved performance of annotation creation. Improved performance of model settings. Improved performance of model navigation. Improved performance of the dynamic rebase function. Improved performance when you edit an object's layer visibility. Improved performance

when you select all or deselect all. Improved performance when you create a new command. Improved performance of the freeze command. Improved performance when you enter an LDraw project. Improved performance when you use the Table/Form option. Improved performance of undo and redo operations. Improved performance when you view an undo trail. Improved performance of the rect() function. Improved performance of the clone command. Improved performance of the defringe command.
